LEARNING CENTER

Training Program Overview

With over 150 years of engine experience to draw from, DEUTZ offers effective training to meet your needs. Whether you are an end user, equipment manufacturer, or service center, we can provide courses that are relevant to your business. Our factory certified courses provide in depth coverage of the latest industrial engine technologies primarily focusing on how to efficiently maintain, diagnose, and repair the full DEUTZ product line.

Subjects are broken into learning plans which contain all activities necessary to become proficient with a subject. This may include online courses, classroom training, as well as post-tests.

Three competency levels are available to assist you in finding the training that best suits your needs:

CC1

Developed for entry level technical and non-technical roles.

This training covers engine introduction and maintenance. It is typically comprised of online courses that are intended to cover the basics.

CC2

Developed for End Users, Rentals, Equipment Manufacturers, and CC2 Dealers

This typically consists of 8 hours of online training and covers external engine including fuel, emissions, and electrical systems. **CC2 certification is a prerequisite for CC3 training.**

CC3

Developed for Distributors and CC3 Dealers

This training is typically 3-5 days in length and covers the entire engine including internal mechanical, fuel, emissions, and electrical systems.
